PROJECTS

APNA GADI – EV Rental Web Application (Academic Project) [🔗](#) | [React.JS](#) **2025**

- Developed a full-stack vehicle rental platform using React.js for the frontend, enabling users to browse, book, and manage vehicle rentals with an intuitive interface.
- Implemented secure user authentication, admin dashboards for vehicle and booking management, and seamless navigation using React Router.
- Enhanced user experience with dynamic state management and responsive design, supporting both customer and admin workflows.

Medical Consultation Website [🔗](#) / [MERN](#) **2024**

- Implemented features such as virtual consultations, specialist referrals, health assessments, and follow-up care, providing users with accessible and reliable healthcare services online. Integrated a chatbot for instant assistance, enhancing user engagement and support throughout the consultation process.
- Implemented features such as virtual consultations, specialist referrals, health assessments, and follow-up care, providing users with accessible and reliable healthcare services online. Integrated a chatbot for instant assistance, enhancing user engagement and support throughout the consultation process.

Lucky Partner- Dating application(Currently working on it) [🔗](#) / [MERN](#) **2025**

- Designed and developed a full-stack dating application featuring swipe-based matching, real-time chat, user profiles, and premium membership options.
- Implemented secure authentication, image uploads, location-based matching, and in-app notifications to enhance user engagement and safety.
- Utilized RESTful APIs, React hooks, and modular CSS for a scalable, responsive, and user-friendly experience across devices.

INTERNSHIP

Infokshetra Technology Vijayapura **10-02-25 | 13-03-25**

Worked on **Apna Gadi** – EV Rental Web Application.
